1. Claims 1-7 and 9-14 are again rejected under 35 U.S.C. 103(a) as being unpatentable over applicants' statement of the prior art for the reasons of record.

The three Japanese patents that exemplify applicants' statement of the prior art all disclose intermediate layers containing hollow particles having the same particle size range as claimed by applicants. The experimental modification of this prior art in order to ascertain optimum operating conditions (e.g., determine the size and mass ratio of the hollow particles employed) fails to render applicants' claims patentable in the absence of unexpected results. To date, such evidence has not been submitted.
